

*B2 Sub C2*

9. (Amended) A method for picking up a call in a group pickup system in a communication network having one or more servers, comprising the steps of:  
invoking the group pickup system;  
establishing a connection to a group pickup destination to enable said caller to be parked at said destination, said destination being a user selectable parking location located anywhere within the network; and  
connecting a call pickup party with said parked caller;  
wherein said group pickup system comprises a supplementary service group pickup system.

*B3 Sub C3*

12. (Amended) A group pickup system in a communication network having one or more servers, comprising:  
means for invoking the group pickup system;  
means responsive to said invoking means for establishing a connection to a group pickup destination to enable said caller to be parked at said destination, said destination being a user selectable parking location located anywhere within the network; and  
means for connecting a call pickup party with said parked caller;  
wherein said group pickup system comprises a supplementary service group pickup system.

*B4 Sub C4*

15. (Amended) A system for enabling group pickup in a communications network having more than one server comprising:  
a request unit to enable operation of the group pickup system when there is an unanswered call at a member station;  
a connect unit responsive to said request unit to make local and/or remote connections to various group member stations within the network which may act as call pickup stations or unanswered stations; and
